

Sarah loved science class more than anything. Her goal was to learn something new about the world around her every day.

So far her class had learned about magnets, animal habitats, and the moon. This morning they were starting a new lesson.

DNA

- Deoxyribo
- Nucleic
- Acid

"Today we're going to learn about DNA," Mr. Bowman told the class. "Does anyone know what that is?"

"I do!" Sarah said. "DNA stands for Deoxyribonucleic Acid. All living things have DNA, like plants, animals, bugs, and human beings." Sarah lifted up a drawing she'd made of a double helix. "DNA looks like this."
